Full stack web developer with a passion for learning and creating scalable and functional applications. I started learning web-development to help on a literary start-up project with friends, but kept coding after falling in love with the process. With a background in English and business, along with experience in object-oriented programming and front-end frameworks, I see big picture design, understand its technical details, and convey the steps needed to get there.

TECHNICAL PROJECTS

Hikari Project - demo**| dummy email: 'dude@hogwarts.edu'|password: 'dude'**
Social app for categorizing and reviewing books

- Created an application using Ruby on Rails for users to create a database of books written, users, followers, and comments
- Utilized JQuery and Javascript front-end to connect with Rails API backend
- Developed password encryption with has_secure_password gem and OAuth functionality for log-in and sign-up
- Designed ActiveRecord database and routing using RESTful architecture

Non-Instant Chat App - demo **| dummy username: 'Bob'**
Messaging application inspired by Facebook's Messenger Chat
- Used React mainframe to create a dynamic single page app that logs messages in a chat-room setting
- Linked Rails API Backend through Javascript
- Wrote reducers and action creators, utilizing Redux middleware software to capture data from back-end APIs

CSS Styling Project - demo
HTML and CSS framework pages for practicing design skills
- Created static framework pages for design and CSS demonstration with signup, login, and content web pages

Manga Organizer - demo**| email: 'harry@hogwarts.edu'|password: 'harry'**
Application to organize manga in a user's specific collection
- Utilized Ruby and Sinatra to create a manga organizer that lists and categorize books, along with the ability to add and create books on user's lists

TECHNICAL SKILLS

Ruby on Rails| Ruby | React | Redux | HTML | Fabric | Wagtail | Django | Bootstrap | Javascript | Python | Emacs | CSS | SQL | Git |MS Office | JQuery | Node.js

WORK EXPERIENCE

Zogotech – *Software Engineer Intern*, Austin, TX   December 2018 - Present
- Wrote a command line tool to record statistics of system utilization and processes using the psutil library and Python
- Developed command line tool to directly download files and scrape websites into CSV files with Pandas library
- Created tests using pytest library for checking whether files have been run through the necessary checks
- Used Fabric scripts to automate installation of virtual environments and dependencies on virtual machines
- Built website using a Wagtail CMS and Bootstrap to document software and code updates for clients

Exela Technologies – *Coding Operator/Document Capture Specialist*, Austin, TX   March 2017 - December 2018
- Measured production results throughout the day to meet daily deadlines on mail processing quotas
- Taught co-workers the processes of mail sorting, prepping, and document typing for various companies

I Live Here, I Give Here – *Non-Profit Liaison (Temp)*, Austin, TX   February 2017 - March 2017
- Kept constant communication with non-profits to attain tax and legal documentation for AmplifyATX day
- Organized volunteers and telephone banks in large-scale events to raise over $9 million in donations for non-profits in the city of Austin

Earnshaw Books – *Marketing and Sales Intern*, Shanghai, China   June 2016 - August 2016
- Developed marketing timetable and online presence for new book releases on English-based websites
